

ProjectExecutableFiles

Date	5July2026
TeamID	
ProjectName	CreditCardApprovalPrediction
MaximumMarks	3Marks

ProjectExecutableFiles

Step1:Submission Checklist

S.No	ItemtoSubmit	Submitted(Yes/No/NA)
1	Complete source code (allfilesandfolders)	Yes
2	README/ Setup Guide (instructions to runtheproject)	Yes
3	requirements.txt/package.json/dependency file	Yes
4	Databaseschema/seedfiles(ifapplicable)	Yes
5	Environment configuration file (.env.example or similar)	NA
6	DeployedapplicationURL(ifhosted)	No (LocalDeployment)
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile/Containerizationconfig(ifapplicable)	NA
9	Testfilesandtestresults	Yes
10	Demovideoorwalkthrough(ifrequired)	Yes

Step2:File/ FolderStructure

Credit_Card_Project/

—1.Brainstorming&Ideation/	-Initialprojectideasandproblemidentification.
—Brainstorming.pdf	-Brainstormingdiscussion.
—LiteratureSurvey.pdf	- Existingresearchreview.
—ProblemStatement.pdf	- Definestheprojectproblem.
—EmpathyMap.pdf	-User needsandpainpoints.
—2.RequirementAnalysis/	-Projectrequirements.
—CustomerJourney.pdf	-Userinteractionflow.
—DataFlowDiagram.pdf	-Systemdataflow.
—FunctionalRequirements.pdf	- Systemfunctionalities.

—ProjectPresentation.pptx	-Projectpresentation.
—8.ProjectDemonstration/	-Demonstrationfiles.
—DemoVideo.mp4	-Projectdemovideo.
—Presentation.pptx	-Demonstrationslides.
—README.md	-Projectoverview.
—requirements.txt	-Dependency list.
— .gitignore	-Gitignoreconfiguration.

Step3:Deployment/AccessDetails

Field	Details
Hosted/DeployedURL	NotDeployed (RunsonLocalFlask Server)
LoginCredentials (Demo)	NotApplicable
Platform/Hosting Provider	LocalFlaskDevelopment Server (Python+Flask + SQLite)
RepositoryLink	https://github.com/asmath2031-stack/credit-card-approval-project.git
DemoVideoLink	https://drive.google.com/file/d/1V0390hBMD_cee3hTpiXqAJvaJsXfunktG/view?usp=drivesdk

Step 4: Run Instructions

Pre-requisites: Python 3.10 or above, Visual Studio Code, Flask, NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn, SQLite3, and a web browser (Google Chrome or Microsoft Edge).

Step 1: Open the **Credit_Card_Project** folder in Visual Studio Code

Step 2: Create and activate the virtual environment using the commands: "python -m venv .venv" and ".venv\Scripts\activate" or ".\venv\Scripts\Activate.ps1".

Step 3: Install all the required Python libraries using the command: "pip install -r requirements.txt".

Step 4: Start the Flask application using the command: "python app.py".

Step 5: Open your web browser and navigate to <http://127.0.0.1:5000/>.

Step 6: Enter the applicant details in the form, click **Predict Credit Approval**, view the prediction result along with the confidence score, access the **Prediction History** to view saved records, and open the **Dashboard** to view prediction statistics and analytics.

Step 5: Known Issues/Limitations

S.No	Known Issue/Limitation	Workaround/Status
1	Application currently runs only on the local Flask development server.	Deploy the application to a cloud platform such as Render, Railway, or Azure.
2	SQLite database is suitable only for small to medium-sized applications.	Upgrade to MySQL or PostgreSQL for large-scale deployment.
3	The application requires a local Python environment to execute.	Package the application using Docker or deploy it as a web service for easier access.
4	Basic login authentication is implemented.	Add password encryption, email verification, and role-based access control.
